Björn Hjulström is active at the Archaeological Research Laboratory, Stockholm University. He has a long experience of fieldwork, both abroad, as part of a research project in Papua New Guinea and in connection with developer-funded archaeology in Ireland, and also in Sweden since 1998. From 2002 onwards he has mainly been working at the ARL, with a special interest in geochemical analysis. At the ARL he was in charge of the seminar excavations from 2003 to 2007. He has also been employed on a contract basis performing lipid analyses on ceramics and soil chemical analysis.

Patterns in Diversity
Geochemical analyses and settlement changes during the Iron Age – Early Medieval time in the Lake Mälaren region, Sweden
